Mark scheme

6380
June 2014

Version/Stage: Final

Mark schemes are prepared by the Lead Assessment Writer and considered, together with the relevant questions, by a panel of subject teachers. This mark scheme includes any amendments made at the standardisation events which all associates participate in and is the scheme which was used by them in this examination. The standardisation process ensures that the mark scheme covers the students' responses to questions and that every associate understands and applies it in the same correct way. As preparation for standardisation each associate analyses a number of students' scripts: alternative answers not already covered by the mark scheme are discussed and legislated for. If, after the standardisation process, associates encounter unusual answers which have not been raised they are required to refer these to the Lead Assessment Writer.

It must be stressed that a mark scheme is a working document, in many cases further developed and expanded on the basis of students' reactions to a particular paper. Assumptions about future mark schemes on the basis of one year's document should be avoided; whilst the guiding principles of assessment remain constant, details will change, depending on the content of a particular examination paper.

Further copies of this Mark Scheme are available from aqa.org.uk

Key to mark scheme abbreviations

M	mark is for method
m or dM	mark is dependent on one or more M marks and is for method
A	mark is dependent on M or m marks and is for accuracy
B	mark is independent of M or m marks and is for method and accuracy
E	mark is for explanation
✓ or ft or F	follow through from previous incorrect result
CAO	correct answer only
CSO	correct solution only
AWFW	anything which falls within
AWRT	anything which rounds to
ACF	any correct form
AG	answer given
SC	special case
OE	or equivalent
A2,1	2 or 1 (or 0) accuracy marks
-x EE	deduct x marks for each error
NMS	no method shown
PI	possibly implied
SCA	substantially correct approach
c	candidate
sf	significant figure(s)
dp	decimal place(s)

No Method Shown

Where the question specifically requires a particular method to be used, we must usually see evidence of use of this method for any marks to be awarded.

Where the answer can be reasonably obtained without showing working and it is very unlikely that the correct answer can be obtained by using an incorrect method, we must award **full marks**. However, the obvious penalty to candidates showing no working is that incorrect answers, however close, earn **no marks**.

Where a question asks the candidate to state or write down a result, no method need be shown for full marks.

Where the permitted calculator has functions which reasonably allow the solution of the question directly, the correct answer without working earns **full marks**, unless it is given to less than the degree of accuracy accepted in the mark scheme, when it gains **no marks**.

Otherwise we require evidence of a correct method for any marks to be awarded.

Q	Solution	Marks	Total	Comments
1(a)	$H_0 : p = 0.35$ $H_1 : p \neq 0.35$ Under H_0 , the number buying tickets in advance ~ Bin(25, 0.35) Then $p(X \geq 13) = 1 - 0.9396$ $= 0.0604$ which is > 0.05 . Cannot reject H_0 at the 10% level No evidence of difference from 35 percent.	B1 B1 M1 A1 AF1 E1		For both Use of correct distribution For finding $p(X \geq 13)$ or $p(X > 13)$ from a binomial distribution (0.06(0) ~ 0.061) ft their prob compared with 0.05 Correct conclusion in context. Needs all previous marks. <i>(Note: Using $p(X > 13)$ gives $P=0.0255$ then reject H_0 for max 4/6 BIB1M1A0AF1E0)</i>
(b)	e.g. Not a random sample/trials not independent/populations different e.g. Probably some are travelling together so likely to buy tickets the same way/maybe commuter train so many season tickets (ie 35% not relevant)/all in a carriage not comparable with all using the station.	E1 E1	 2	Relevant reason More context
		Total	8	

FINAL

Q	Solution	Marks	Total	Comments
2(a)	No. with scratches ~ B(200, 0.03) Which is approx Poisson with $\lambda = 200 \times 0.03 = 6$ Then $P(X > 4) = 1 - 0.285(1)$ $= 0.715$	B1 B1 M1 A1	4	For Poisson (stated or clearly used) May be implied Allow for $1 - 0.151(2)$ (= 0.849) Allow for attempt at binomial calculation (may be implied by 0.719 or 0.853) AWRT 0.715
(b)	No. with scratches (X) ~ B(10000, 0.25) which is approximately N(2500, 1875) $P(X \leq 2550) = P\left(Z < \frac{2550.5 - 2500}{\sqrt{1875}}\right)$ $= P(Z < 1.16(6))$ $= 0.879$ (from $z = 1.17$)	B1 M1 A1 M1 m1 A1	6	Normal approximation stated or clearly used. Mean = 2500 cao, variance = 1875 cao (or SD = 43.3 AWRT). May be implied. Standardizing (allow missing (2550) or wrong (2549.5) CC; ignore sign Use of 2550.5 and correct sign. May be implied by $Z = 1.16 \sim 1.17$ AFWW 0.8765 ~ 0.879 (more exact value 0.8782) Notes: (i) No CC gives $Z=1.15(5)$ & $p=0.8759$ for max 4/6 (ii) Wrong CC gives $Z=1.14(3)$ & $p=0.8735$ for max 4/6 (iii) Use of exact B(10000, 0.25) gives answer 0.8781 which is in range but scores 1/6 if first M1 is not earned.

Q	Solution	Marks	Total	Comments
4(a)(i)	Use Poisson with $\lambda = 10$.	B1	3	Both
	From tables, $P(10) = 0.5830 - 0.4579$ $= 0.12511$	M1 A1		Both terms correct. Alternatively, use correct expression $P(10) = e^{-10} \frac{10^{-10}}{10!}$ AWRT 0.125
(ii)	Total (T) is normal with mean $10 \times 4.89 = 48.9$ and variance 10×0.92^2 $= 8.46(4)$	B1 M1 A1	6	For 48.9 cao This expression oe seen cao (or SD = 2.908 ~ 2.91)
	Then $P(T < 45) = P(Z < \frac{(45 - 48.9)}{\sqrt{\text{Their variance}}})$	M1		Ignore sign. Allow attempted use of CC 44.995 (or even 44.99) instead of 45. Gives subsequent answers in range.
	$= p(Z < -1.34)$	A1		AWRT -1.34
	$= 1 - 0.90988$			0.0894 ~ 0.0902
	$= 0.09(012)$	A1		Equivalently, using means: Using 4.5 (B1) Var = $0.92^2/10$ oe (M1) = 0.0846(4) A1. Then M1A1A1 as before.
(iii)	$0.12511 \times (1 - 0.09012)$ $= 0.11384$	M1 A1	2	Using their (i) \times (1- their (ii)). 0.113 ~ 0.114 SC (i) \times (ii) $0.125 \times 0.09 = 0.011(25)$ gets B1 for 0.011~0.012
	(b) $\bar{x} = 5.4286$ $s = 1.5291$	B1		For AWRT 5.43 and $s_{n-1} = 1.52 \sim 1.54$ or $s_n = 1.4157$ (1.41 ~ 1.42) (ignore labels) Or equivalent variances.
	$H_0 : \mu = 5$ $H_1 : \mu > 5$	B1		Both

FINAL

	$t = \frac{5.4286 - 5}{1.5291/\sqrt{7}}$ <p>= 0.74(15)</p> <p>Critical value $t_6 = 1.943$</p> <p>Accept H_0 at 5% level. No evidence that mean amount spent is over £5.</p>	<p>M1</p> <p>m1</p> <p>A1</p> <p>B1</p> <p>B1</p> <p>AF1</p> <p>Total</p>	<p>M1 for use of $\frac{s_{n-1}}{\sqrt{n}}$ or $\frac{s_n}{\sqrt{n-1}}$ in test statistic formula Correct formula, ignore sign for m1.</p> <p>Or $t = \frac{5.4286 - 5}{1.4157/\sqrt{6}}$</p> <p>AWFW 0.74 to 0.744 For 6 df For 1.94 cao or $p = 0.2432$ (AWFW 0.24 to 0.25)</p> <p>ft their t and critical t (both positive) OR ft their p-value and 0.05 but still requires positive t. Requires M1 and m1. Requires context, H_0 and H_1 the right way round, if stated, and 1-tailed test in the correct direction.</p> <p>8</p> <p><i>(Note: If $\sigma = 0.92$ is used, B1B1 then nothing.)</i></p> <p><i>Alternatively, for full marks, may use 1-sided CI(lower limit $4.31 < 5$, accept H_0) or 1-sided decision interval ($6.12 > 5.43$, accept H_0)</i></p> <p>19</p>
