

# A Level Statistics

## AQA Past Exam Questions

### SOLUTIONS

## TOPIC: Confidence Intervals and the Central Limit Theorem

Candidates may use any calculator allowed by Pearson regulations. Calculators must not have retrievable mathematical formulae stored in them.

#### Instructions

- Use **black** ink or ball-point pen.
- If pencil is used for diagrams/sketches/graphs it must be dark (HB or B). Coloured pencils and highlighter pens must not be used.
- **Fill in the boxes** at the top of this page with your name, centre number and candidate number.
- Answer **all** questions and ensure that your answers to parts of questions are clearly labelled.
- Answer the questions **on paper**
- You should show sufficient working to make your methods clear. Answers without working may not gain full credit.
- Unless otherwise stated, statistical tests should be carried out at the 5% significance level.
- When a calculator is used, the answer should be given to three significant figures unless otherwise stated.

#### Information

- **You may use the** booklet 'Statistical Formulae and Tables'
- There are **11** questions in this question paper. The total mark for this paper is **99**
- The marks for **each** question are shown in brackets – use this as a guide as to how much time to spend on each question.

#### Advice

- Read each question carefully before you start to answer it.
- Try to answer every question.
- Check your answers if you have time at the end.
- If you change your mind about an answer, cross it out and put your new answer and any working underneath.
- Check your answers if you have time at the end.

<p><b>(a)</b></p> <p><math>\bar{x} = 19.14 \quad s_{n-1}^2 = 29.1(2125)</math></p> <p><math>19.14 \pm t_{24;0.005} \frac{5.396}{\sqrt{25}}</math></p> <p>with <math>t = 2.797</math></p> <p><math>= 19.14 \pm 3.01875</math></p> <p>giving limits (16.121, 22.159)</p>	B1		<p>For both. PI</p> <p>Allow for <math>s_{n-1} = 5.396(411)</math></p> <p>or <math>s_n^2 = 27.9564</math></p> <p>or <math>s_n = 5.287381</math></p> <p>All answers truncated or rounded to 3sf.</p>
	M1		<p>Correct form including use of <math>t</math> distribution and <b>either</b> use of <math>\sqrt{25}</math> with <math>s_{n-1}</math> <b>or</b> use of <math>\sqrt{24}</math> with <math>s_n</math></p> <p>PI</p>
	B1		<p>Allow 2.8</p>
	A1		<p>Completely correct numerical expression</p>
	A1	5	<p>Either form</p> <p><math>19.1 \pm \text{AWRT}(3.02)</math></p> <p>OR</p> <p><math>16.05 \sim 16.2</math> and <math>22.1 \sim 22.2</math></p>
<p><i>Note:</i> Use of <math>z (=2.5758)</math> gives (16.36,21.92) for first B1 only</p>			
<p><b>(b)</b></p> <p>Because, with new sample values, the sample SD might increase to such an extent that <math>t \times \frac{SD}{\sqrt{n}}</math> is larger, making the interval wider.</p>	E1		<p>Some consideration of SD/variance/variation.</p>
	E1	2	<p>Needs recognition that SD may increase <b>and</b> clear acknowledgement that it may more than counteract the effect of increasing <math>n</math> (and decreasing <math>t</math>).</p>
